

# pco.4000 cooled digital 14 bit CCD camera system

- superior resolution (4008 × 2672 pixel)
- 14 bit dynamic range
- frame rate of 5 fps at full resolution
- image memory in camera (camRAM up to 4 GB)
- excellent low noise of 11 e<sup>-</sup> rms @ 8 MHz
- thermoelectrical cooling of -45 °C vs. ambient
- standard interfaces (IEEE 1394, camera link, GigE Vision)
- UV sensitive & color CCD image sensor available
- double shutter and modulate versions available

# pco.4000

This high resolution 14 bit cooled CCD camera system comprises advanced CCD and electronics technology. With the new approach to integrate the image memory (camRAM) into the camera itself, it enables unmatched fast image recording with 128 MB/s. The system features thermoelectrical cooling (down to  $-45\text{ }^{\circ}\text{C}$  vs. ambient), an excellent high resolution (4008 x 2672 pixel) and low noise (down to  $11\text{ e}^{-}$  rms). It consists of a compact camera with an external intelligent power supply. The image data are transferred via customer selectable standard data interfaces to a computer (IEEE 1394 (“firewire”), camera link, GigE Vision). The available exposure times range from  $5\text{ }\mu\text{s}$  to 49 days. This digital CCD camera system is perfectly suited for low light and high resolution camera applications, like microscopy, aerial photography or quality control.

The camera is available as high performance pco.4000 comprising the double shutter function for PIV or as advanced scientific grade pco.4000 s. A modulation version pco.4000 mod allows in addition to accumulate multiple exposures into one image.

## technical data

	unit	setpoint	pco.4000	pco.4000 s

## software

Camware software for camera control, image acquisition and archiving of images in various file formats, WindowsXP, Vista and later, 32 bit-dynamic link library (DLL) is available for user customisation and integration on PC platforms (software development kit – SDK), software is operational in either single mode or with built-in recorder functions, drivers for popular third party software packages are available (see website)

## options

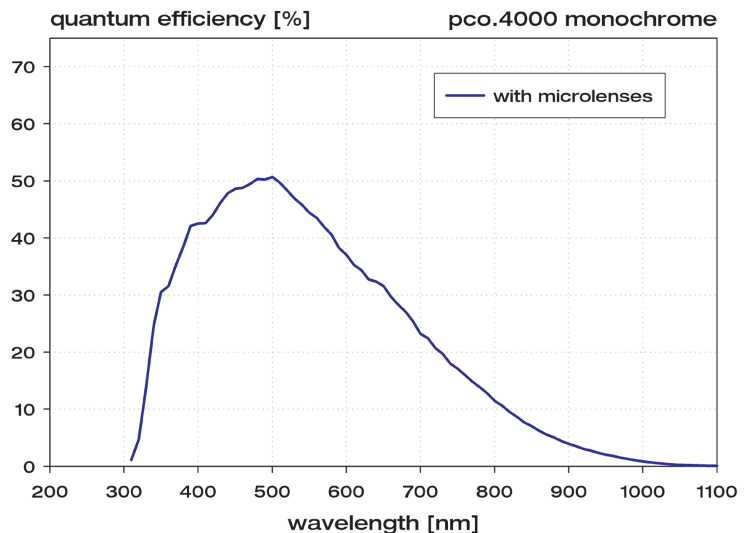

CCD image sensor in color & UV sensitive version  
custom-made versions  
camRAM available in: 512 MB, 1 GB, 2 GB & 4 GB  
external fan cooling, DC version

## frame rate table [frames per second]

The given resolutions are selected for the frame rate calculations in the tables only, they are not mandatory.

pixelclock	8 MHz		32 MHz	
used A/D converters	1	2	1	2
full frame	0.7	1.4	2.7	5.0
2 x 2 binning	1.4	2.7	5.2	9.2
2 x 8 binning	5.0	9.2	15.7	24.0

## quantum efficiency

# quantum efficiency

(KAI-11002 color qe curves as measured by Kodak)

## areas of application

■ laser induced fluorescence ■ high resolution microscopy ■ luminescence microscopy ■ electron microscopy ■ fluorescence spectroscopy (up to NIR) ■ bioluminescence ■ chemoluminescence ■ low light level imaging ■ imaging of bio markers (e.g. green fluorescent protein, GFP) ■ time resolved spectroscopy ■ spray analysis ■ hydrodynamics ■ electrophoresis ■ absorption & luminescence spectroscopy ■ imaging of potential sensitive dyes (Neuroscience) ■ security ■ astronomy ■ combustion process analysis ■ gel imaging ■ fuel injection ■ scientific imaging ■ PIV imaging ■ fluorescence imaging ■ semiconductor quality control ■ aerial photography ■ flow visualization ■ traffic control and surveillance

Full resolution image (4008 x 2672 pixel) of a pco.4000, recorded with a Nikon lens (focal length = 200 mm, aperture = 16). It corresponds to 8 images of a sensicam camera with SVGA resolution.

Sub-image (251 x 167 pixel) of image above, illustrating the huge amount of information comprised in one full resolution image of the pco.4000. Even the license plate of the car could be read.
