sisu **CHEMA** *Chemical Imaging Workstation*

SisuCHEMA is a complete chemical imaging system, characterized by speed, simplicity and superior performance. SisuCHEMA employs a pushbroom imaging technology providing several advantages for the user: high speed, low heat load from illumination and flexibility to most sample shapes and sizes. Applying pushbroom imaging SisuCHEMA is also first step towards on-line process control.

» NEAR INFRARED CHEMICAL IMAGING IN FEW SECONDS «

SisuCHEMA combines NIR spectroscopy with high resolution imaging. It provides detailed information on the chemical components, their quantities and distributions within the sample. It is invaluable information for the characterization and quality assurance of advanced materials, where the functionality of the material is dependent on its chemical and physical structure.

HOW SISUCHEMA WORKS

SisuCHEMA is a complete chemical imaging workstation. User places samples into specially designed sample trays, then using the ChemaDAQ data acquisition software, the spectral image is acquired and saved in seconds.

MANY APPLICATIONS

The SisuCHEMA is ideal for pharmaceutical, geological and agricultural applications where high spatial resolution is required and samples

are small. In the SisuCHEMA the maximum sample size is 200 x 300 x 45 mm. The system can image samples of 10 mm or smaller at a very high pixel resolution of 30 microns, and offers flexible settings to coarser resolutions.

SisuCHEMA employs pushbroom imaging, acquiring the image one line at a time while scanning the sample on a moving sample tray. Each line has a 320 pixel field of view. In the scanning dimension the number of lines is dependent on the selected scanning length. The variable scanning length allows the user to image longer samples, or multiple sequential samples, in a single linear scan. The maximum scanning length is 300 mm,

PERFORMANCE, EFFICIENCY AND EASE OF USE

SisuCHEMA is based on SPECIM's Spectral Cameras operating in the near infrared range with high spectral resolution. Light throughput is 10 to 20 times higher

Applications

- Geology
- Tablet analysis
- Blister package inspection
- Blend uniformity
- Granule Size and Size Distribution
- Food and Dairy
- Agricultural Material Screening
- Forensics
- Life Sciences

Blister package inspection. Red indicates empty blister, Green indicates normal blister and Blue indicates false product.

Visualization of MNF bands 2,3 and 4 of a rock sample showing the inherent variability of the material. The full hyperspectral image (data cube) with 320 x 360 spatial pixels and 256 spectral bands in the range 1 000 - 2 500 nm was acquired in less than 6 seconds.

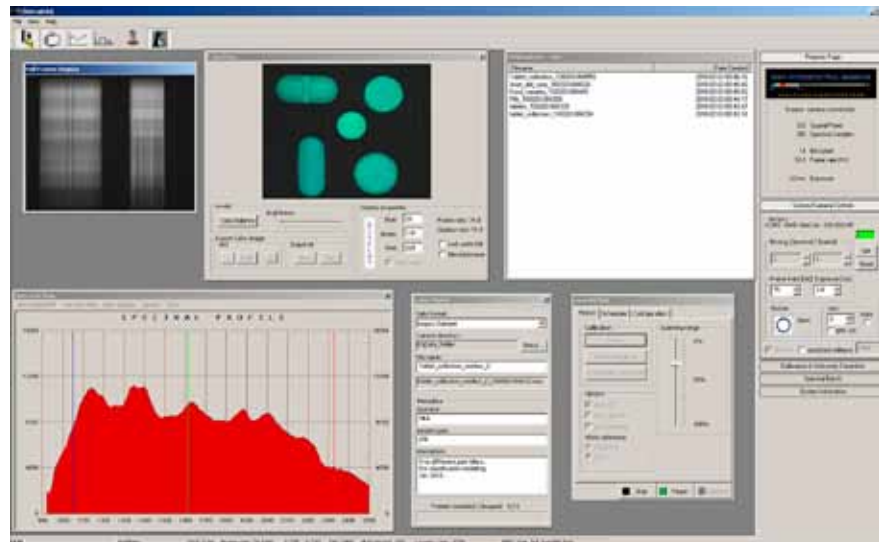

than in similar instruments that implement tunable filters. The result is considerably faster imaging under similar illumination conditions. Furthermore, push-broom imaging only requires line illumination on the sample, which significantly reduces the heat load on the sample. SPECIM's unique line illumination technique optimizes the imaging of various surfaces and textures. SisuCHEMA is a stand-alone instrument, which is user friendly and easy to set up and maintain. SisuCHEMA is operated using pre-installed ChemaDAQ data acquisition software.

FROM LAB TO PROCESS

SPECIM's SisuCHEMA is the only chemical imaging technique offering a direct application path from laboratory to real-time process. Using a push-broom hyperspectral camera, SisuCHEMA works like a high speed linescan camera. It acquires and builds the spectral image of a moving sample line by line, and simultaneously acquires all wavelengths for each line. This imaging technique is ideal solution for on-line process monitoring, where samples are in continuous motion. This provides another significant advantage to the SisuCHEMA user. The applications that are developed for sample analysis in laboratory and near production lines can be directly transferred to the real time world of on-line process and quality control. There is no need to adapt and invest in different technologies for online monitoring.

SisuCHEMA performance specifications

| Optical and technical characteristics | VNIR | NIR | SWIR |
|---------------------------------------|--|---------------------------------|------------------|
| Operation mode | High speed push-broom hyperspectral | | |
| Spectral range | 400 - 1 000 nm | 900 - 1 700 nm | 1 000 - 2 500 nm |
| Spectral sampling / pixel | 0.78 - 6.27 nm | 4 nm | 6.3 nm |
| Spectral resolution | 2.8 nm | 6 nm | 10 nm |
| # spatial pixels/ line | 1 312 | 320 | |
| Pixel size on sample | 38 - 152 µm | Scalable from 30 to 600 microns | |
| Field of view on sample | 50 - 200 mm | Scalable from 10 to 200 mm | |
| Maximum sample size | 200 x 300 x 45 mm (WxLxT) | | |
| Scanning rate | 100 hyperspectral line images/ s (max), corresponding to - 3 mm/s with 30 micron pixel - 30 mm/s with 300 micron pixel - 60 mm/s with 600 micron pixel | | |
| Typical scanning time | < 7 s for single 320 x 320 pixel image capture with 256 spectral bands | | |
| Illumination | SPECIM's diffuse line illumination unit | | |
| Data format | BIL file format, Evince and ENVI compatible | | |
| Instrument calibration | Instrument is delivered with spectral calibration. Image data is automatically calibrated to reflectance by measuring an internal standard reference target before each sample scan. | | |

ChemaDAQ

This combined user interface and data acquisition tool is delivered with SisuCHEMA.

SPECIM IS A WORLD LEADING COMPANY for hyperspectral imaging instruments, from UV through VNIR and SWIR up to LWIR (long wave infrared).

We provide ImSpector imaging spectrographs, Spectral Cameras and hyperspectral imaging solutions to a rapidly increasing number of industrial OEM customers and a large scientific clientele. SPECIM'S AISA FAMILY of airborne hyperspectral sensors provides market leading solutions for remote sensing, from small UAV systems to full featured commercial, research and military remote sensing tools.

Our hyperspectral products are known for the highest performance at the lowest budget in the market. They are used in an increasing range of demanding applications like color, Process Analytical Technology (PAT), life sciences, chemical imaging, military and security.
